

TLC PRMS

PORTABLE REMOTE MONITORING SYSTEM

“because you
can only
control what
you can
measure”

PRMS is a powerful, user friendly data recorder that can be used to remotely monitor energy usage by equipment in commercial and industrial facilities. The software, designed with the user in mind, is easy to set up and use, with an on-line help menu provided.

PRMS is the perfect tool for utilities, consultants and facilities who need to perform energy audits. The PMRS software can adapt to changes in local and international standards. Several configurations are available to suit user applications.

FEATURES

- Electrical Power (1, 2 and 3 wattmeter)
- Maximum Demand and Energy
- Disturbance and Power Quality
- Remote data collection from site with GSM or LAN connection
- Up to 32 input channels
- Signal Isolators for 230V AC and 5A AC
- Clamp-on split core CT's
- Temperature probes for internal and external building temperature
- Enclosure with back up supply
